

PIRIYA LAPA

Business Analyst | Technical BA

Piriyalapa@gmail.com | +66 98-855-4978 | Bangkok, Thailand | [linkedin.com/in/piriya-lapa-75b6371b8](https://www.linkedin.com/in/piriya-lapa-75b6371b8)

SUMMARY

Business Analyst with a full-stack technical background (React/React Native, TypeScript, Python/FastAPI, MySQL) and 3+ years of direct stakeholder-facing experience in luxury retail. Skilled at translating ambiguous business problems into clear requirements — most recently owning full requirement analysis and system design (SRS, DFD, ERD, Sequence diagrams) for Lumine, a CRM automation tool built to close a customer follow-up gap in retail sales. Combines hands-on data reconciliation experience with the ability to bridge business and technical stakeholders.

EXPERIENCE

Senior Sales Associate | Hugo Boss

June 2022 – Present

- Noticed the sales team struggling to keep up with leadership's customer follow-up goals; informally discussed the idea with my manager, then independently owned requirement analysis and process design to build Lumine, a CRM automation tool for the team.
- Manually reconcile daily store sales data against the company's SAP system — a repetitive, error-prone data reconciliation process that directly informed the automation logic and data validation rules built into Lumine.
- Built first-hand expertise in customer retention and follow-up behavior in a high-touch retail environment, translated directly into Lumine's tiered follow-up framework and business rules.
- Bring 10+ years of combined sales and customer-service experience, consistently translating business needs into requirements that both stakeholders and technical teams trust.

Backend Developer (Project-based) | Transcode

Apr 2022 – Jun 2022

- Gathered requirements for a report-generation feature on a car booking system, then built it — pulling data via API integration and transforming it into structured, user-facing summary reports.
- Stack: Node.js, TypeScript, MySQL — short-term project engagement.

Backend Developer | Perumal Technology & Telecommunication (Thailand) Co., Ltd.

Feb 2022 – Apr 2022

- Studied TOR (Terms of Reference) documents for competitive bid proposals, gathered capability requirements from stakeholders, and planned development into sprints for client-facing technical presentations.
- Self-taught system design methodology (DFD, Sequence, Class, and Database diagrams; tech stack selection) by researching reference documentation, then applied it to design and present technical proposals for enterprise bid competitions.
- Developed and maintained the billing cycle calculation feature for a project contracted from AIS (a major Thai telecom operator), handling charge computation and data validation for both legacy and new user accounts.
- Took on ownership of multiple modules previously held by departing team members after the dev team was reduced from 7 to 2 within a short period, maintaining delivery and documentation continuity without senior technical support.

Retail Sales Associate | Gap (Minor Corp.) → Zara → Polo Ralph Lauren → JD Sports Thailand
2010 – 2022

- Built 9+ years of progressive retail sales experience across four international fashion/lifestyle brands, advancing to Senior Sales roles.
- Developed strong stakeholder communication and consultative discovery skills across varied retail environments prior to luxury retail.
- Collaborated across the stack with React/TypeScript frontend components as part of a self-directed 1-year, full-stack learning path prior to this role.

PROJECTS

Lumine

Self-initiated productivity tool, informally discussed with my manager — MVP/pilot stage, in active use

- Problem: Sales associates in luxury retail routinely lose track of post-purchase customer follow-ups, directly impacting repeat sales.
- Requirement analysis: Owned full requirement-gathering and system design process — wrote SRS, designed DFD, ERD, and Sequence diagrams, and translated leadership's tiered follow-up cadence into concrete system logic and business rules.
- Solution: Specified and directed the build of a CRM app that imports customer purchase data from SAP exports (Excel), validates and reconciles it against business rules, and surfaces daily "who to contact today" reminders on a mobile app.
- Process: Ran sprint planning, defined Git branch strategy, and directed multiple AI coding agents against defined tasks per branch, with review, UAT-style testing, and sign-off at each stage. AI wrote the code; requirements, architecture, and QA decisions stayed fully owned by me.
- Engineering rigor: Structured the build around 7 specialized AI agent roles (Architect, PM, QA, Developer, Security, DevOps, UX/UI) with a written sprint backlog and a blocking pre-sprint gate; QA wrote tests before Developer implemented (TDD) — 326 automated backend tests passing at 100% service coverage.
- Stack: React Native/Expo, TypeScript (mobile) + Python/FastAPI, SQLAlchemy, MySQL (backend) — built end-to-end and self-deployed, in active daily use during the pilot.
- Status: Import, scheduling, and reminder display are working and used daily; completed follow-ups are logged with evidence stored in Google Drive. Customer outreach itself (calls/messages) is currently done manually.

Paws & Pace

Mobile fitness gamification app — team project (2-person)

- Concept: A virtual cat companion whose hunger and evolution are driven entirely by real-world physical activity (GPS-tracked runs/walks, workouts).
- Role: Owned requirement definition and system design, directed the AI-agent-orchestrated build process (React Native/Expo + FastAPI + TiDB) — sprint planning, defined agent roles, review/approval at each stage; brother served as Product Owner, setting feature priority and scope gates.
- Status: v1.0.0 shipped — deployed backend (Render) and installed via EAS build on a physical Android device; 116/116 backend tests and 113/113 mobile tests passing.
- Stack: React Native (Expo), TypeScript, FastAPI, TiDB.

SKILLS

Business Analysis: Requirements gathering, SRS/DFD/ERD/Sequence diagram authorship, process analysis, data reconciliation, stakeholder communication, UAT-style testing and sign-off

Technical: React, React Native, TypeScript, Python, FastAPI, Node.js, MySQL, AI-assisted development (using AI coding tools to accelerate building and prototyping)

Communication: Complex-to-simple explanation (sketchnoting / visual metaphor), English (working proficiency, actively improving), Thai (native)

CERTIFICATIONS

- **AWS Certified Solutions Architect – Associate (SAA) — Planned, post-employment**

EDUCATION

Vocational Certificate (ปวช.), Electronic Industry — Thanyaburi Technical College

Full Stack JavaScript Bootcamp (5 months) — Software Park Thailand (Codecamp)
